

The Market Monitor

WATCHING THE MARKET: your fact source

WEEK OF February 2, 2003

MARKET SURVEILLANCE ADMINISTRATOR

The Market Monitor is published on the Power Pool of Alberta's Web site (www.powerpool.ab.ca) every Tuesday by Alberta's Market Surveillance Administrator to report on key market indicators and weekly trends in Alberta's evolving electricity market.

Alberta's Market Surveillance Administrator (MSA) is in place to monitor Alberta's electricity market for fairness and balance in the public interest. Market Surveillance keeps a close watch on the overall performance of Alberta's electricity market - checking that it operates fairly, efficiently and in an openly competitive manner.

The Market Surveillance Administrator, who is a member of the Power Pool Council, monitors market activity, investigates complaints and makes recommendations to the Council such as changes to rules and procedures. The goal is to assess which aspects of the market are working well and determine where changes are needed - to address issues before they reach the formal complaint stage. That involves keeping an eye on the behaviour of all market participants to make sure rules are followed and actions are competitive and above board.

All electricity prices are quoted in Canadian dollars per megawatt hour (MWh)

WEEKLY HIGHLIGHTS

- The week of February 2 saw continued low pool price volatility, as the standard deviation of pool price remained below the four-week moving average value.
- Pool price reached a high of \$315.64 hour ending (HE) 18 on February 4. The weekly high in the previous week was \$616.53.
- Pool price remained at or below \$100 approximately 92 percent of the time last week (see weekly price duration curve, page 2).
- The average pool price for the week decreased by \$23.50 to \$55.58 from last week's average of \$79.08.
- The year-to-date (YTD) average pool price was \$75.17 as of February 8.
- On-peak prices averaged \$69.43 last week, decreasing from the previous week's average of \$82.97. Average off-peak prices decreased to \$37.11, compared to \$73.89 for the prior week.
- Loads decreased 0.6 percent last week from the previous week, as the total volume of energy traded was 1,234,497 MWh compared to 1,241,814 MWh a week earlier.
- The maximum hourly load last week was 8,095 MW in HE on February 4, with a price of \$56.62. The previous week's highest hourly load was 8291 MW set on January 28 at a price of \$90.48. The minimum hourly load last week was 6,425 MW in HE 4 on February 7, at a price of \$10.19.

WESTERN MARKET SNAPSHOT

- Average on-peak prices for other market areas were higher compared to the previous week. Electricity prices are quoted in \$CDN/MWh at an exchange rate of \$1.5211. Mid-Columbia (Mid-C) averaged \$67.31, compared to \$58.87 for the previous week. California/Oregon Border (COB) averaged \$71.27, compared to \$63.63 for the previous week, while Palo Verde (PV) averaged \$74.70, compared to \$65.07 for the week before. Mid-Continent Area Power Pool (MAPP North) averaged \$64.76, compared to \$68.82 for the previous week. At North Path 15 in California (NP 15) prices averaged \$75.45, compared to \$67.18 for the week before. (see weekly market hub graph page 5)

NATURAL GAS MARKET SNAPSHOT

- The Alberta natural gas closing price recorded on Friday, February was \$7.34 per gigajoule (GJ), increasing from the previous Friday's closing price of \$6.61/GJ.
- On-peak spark spreads were mixed last week. (See spark spreads chart, page 4).

KEY WEEKLY MARKET STATISTICS

The solid bars illustrate the range from minimum to maximum price.

This weekly price duration curve illustrates the percentage of time that prices were at, or above, a given value. For a selected price (vertical axis), the curve yields the percentage of time that the price was equaled or exceeded (horizontal axis).

KEY WEEKLY MARKET STATISTICS

This chart illustrates the average weekly pool prices for the past year, as well as the standard deviation of the hourly pool prices in each week and the four-week moving average standard deviation of pool prices. The standard deviation of pool prices is a measure of the volatility and the four-week moving average is useful in identifying trends in this volatility.

This chart provides a rolling 30-day view of the hourly pool price together with the 7-day moving average. The moving average is useful in identifying trends over the period.

KEY WEEKLY MARKET STATISTICS

This chart provides a rolling 30-day view of average daily pool prices and intra-Alberta gas prices (AECO-C Hub). It illustrates the correlation between the pool price for electricity and the price of gas.

Daily Spark Spreads

These spark spreads (in \$/MWh) compare the cost of generating power using a gas turbine at various thermal efficiencies (GJ/MWh) with the cost of buying power from the grid. The \$/GJ column is based on weighted average daily spot gas prices at Aeco-C, while the \$/MWh column is based on the Power Pool of Alberta daily average pool price. A positive spread indicates that it is economical to buy gas, while a negative spread indicates that it is economical to buy power from the grid.

Date	\$/GJ	\$/MWh (all hrs)	(all hrs)			\$/MWh (on peak)	(on peak)			\$/MWh (off peak)	(off peak)		
			8	9	10		8	9	10		8	9	10
