## MSA FINDINGS

Between October 18, 2024 to June 5, 2025, potential real power capability data was reported from the VXH1 asset. Information available to the MSA indicates that for multiple settlement intervals during the contravention period, the reported data did not fall within the required 2.2 MW accuracy requirement. Section 502.8 of the ISO rules states, in part:

2 The legal owner of a generating unit, aggregated generating facility, transmission facility, or a load facility that is energized and commissioned on or after April 7, 2017 must ensure the facility meets the minimum supervisory control and data acquisition requirements of this Section 502.8 and, where applicable, verify with the ISO that the facility meets the requirements during commissioning and before energization.

[...]

7(5) A legal owner must, if it is providing analog values to the ISO, provide those values with the following minimum accuracy and resolution as specified in Table 2.

Table 2 requires that potential real power capability is reported with an accuracy of +/-10%. As the Maximum Capability (MC) for VXH1 is declared to be 22 MW the required real power capability accuracy is 2.2 MW. The MSA is satisfied that the conduct was a contravention of section 502.8 of the ISO rules.
