**Transmission Outages**

Information regarding long term transmission outages can be located on the AESO site at [www.aeso.ca/transmission/252.html](http://www.aeso.ca/transmission/252.html) and these reports are updated on a regular basis. The shorter term transmission related constraints are reflected in the AESO ATC posting. The MSA will monitor the transmission reports to ensure planned outages are being properly disclosed and will not be publishing transmission outage information.

**Submission and Reporting of Outage Information**

The above outage table is produced using the best available information as submitted to the AESO by market participants. All Alberta loads greater than 40 MW are required to provide outage information as set out in the MSA Trading Practices Guideline. The table presented in this report is prepared by aggregating submitted outage information.

**Methodology**

$$\text{Outage MW} = \text{Rounded} \left\{ \frac{\text{Sum of the MWh of the outage by time period}}{\text{Number of hours in the time period}} \right\}$$

**Disclaimer**

The information presented in these tables is based upon data which by its nature contains a degree of uncertainty. The information may change, and should only be received and relied upon accordingly. The MSA and the AESO are not responsible for any errors or omissions in these tables and make no warranty or representation, express or implied, with respect to the accuracy, completeness or suitability for any purpose of the information contained within the tables and do not accept liability for use of or reliance upon the information or data used within them.
