Week Ending February 9, 2008

## Weekly Highlights

For the week ending February 9, 2008, **Pool Price** averaged \$75.08/MWh and ranged from a minimum of \$15.30/MWh in HE05 on Wednesday to a maximum of \$317.40/MWh in HE20 on Saturday.

**Demand** reached a high of 9443 MW in HE19 on Monday and a low of 7524 MW in HE04 on Wednesday. Average demand for the week was 8543 MW.

**Pool Price** and **Demand** were positively correlated last week with an R-squared value of 0.18.

**Coal Unit Availability** averaged 5345 MW last week. This is an equivalent availability of 89%.

**Gas, Hydro and Other Unit Availability** averaged 3859 MW last week, which is an equivalent of 79%.

**Wind Generation** averaged 221 MW last week. This is an equivalent availability of 44%.

Availability numbers are based on MW offered into the energy merit order.

Alberta was a net importer from **BC** last week with total imports equal to 7,520MWh.

Alberta was a net importer from **Saskatchewan** last week with total imports equal to 17,635 MWh.

Overall, Alberta imported 25,155 MWh of electricity last week.

**Pool Prices** were generally higher than prices in **Mid-C** and higher than prices in **Minn Hub** last week.

**Mid-C** prices averaged \$72.20/MWh on-peak and \$66.41/MWh off-peak.

**Minn Hub** prices averaged \$61.98/MWh on-peak and \$30.54/MWh off-peak.

Prices in \$/CDN at an exchange rate of 0.99562

The average **AECO-C Gas Price** last week was \$7.17/GJ and ranged from a minimum of \$6.52/GJ to \$8.79/GJ.

Prevailing gas prices resulted in market heat rates ranging from a low of 6.08 GJ/MWh to a high of 12.87 GJ/MWh. The average market heat rate for the week was 10.46 GJ/MWh.

The price duration curves show the % of time that prices were at or below a certain value during the week.

For the week ending **February 9**, prices were at or below:

\$20/MWh	7% of the time
\$50/MWh	21% of the time
\$100/MWh	88% of the time
\$250/MWh	98% of the time
\$500/MWh	100% of the time

The heat rate duration curves show the % of time that the implied market heat rate was at or below a certain value during the week. For the week ending **February 9** implied market heat rates were at or below:

5.0 GJ/MWh	10% of the time
10.0 GJ/MWh	59% of the time
15.0 GJ/MWh	89% of the time
20.0 GJ/MWh	93% of the time

### Market Share Statistics

By Fuel Type:

■ Coal 
 ■ Gas - Cogen 
 ■ Gas - Other 
 ■ Hydro 
 ■ Other

By Submitting Customer:

Last week, **coal units** were responsible for **65.1%** of the generation in the province and set price **44.1%** of the time. **Gas-cogen** units accounted for **26.4%** of the generation and set price **47.1%** of the time last week while **other gas** units made up **4.5%** of generation and set price **8.4%** of the time.

A total of **11** market participants set price last week. **Two** market participants set price more than **20%** of the time last week. The top price setter set price **33.5%** of the time and the top five price setters set price a total of **81.4%** of the time.

### Weekly Price Setting by Submitting Customer

# Interties

BC import capacity was 24% utilized last week while BC export capacity was 28% utilized. Energy was being imported into Alberta over the BC tie-line 57% of the time and exported out of Alberta over the BC tie-line 39% of the time last week. There was no activity on the BC tie-line 4% of the time last week.

Note: External reserve contract volumes have been subtracted from the BC import ATC as this capacity is not available to import energy into Alberta.

Saskatchewan import capacity was 69% utilized last week while Saskatchewan export capacity was 0% utilized. Energy was being imported into Alberta over the Saskatchewan tie-line 99% of the time and exported out of Alberta over the Saskatchewan tie-line 0% of the time last week. There was no activity on the Saskatchewan tie-line 1% of the time last week.

Last week, Alberta spot prices were mostly higher relative to prices in the Pacific Northwest as represented by Mid-C index prices, supporting import activity across the Alberta - BC interconnection.

Alberta prices were generally higher than prices in MAPP as represented by spot prices at the Minnesota Hub, which generally supports import activity across the Alberta - Saskatchewan interconnection.

Note: Platt's day-ahead strip prices used in energy through BC and SK graphs.

## Tie-Line Market Shares

Last week, there were a total of 8 importers. The most active importer had a market share of 48.1% while the second most active importer had a market share of 38.0%. There were a total of 3 exporters last week. The most active exporter had a market share of 60.7% while the next largest exporter had a market share of 27.5%.

Note: Market shares are based on the combined activity on both interties.

# Ancillary Services Market

Average on-peak prices paid for active ancillary services last week were **\$17.49/MWh**, **\$17.58/MWh** and **\$18.89/MWh** respectively for active **regulating**, **spinning** and **supplemental** reserves.

Active average off-peak prices were **lower** with the exception of off-peak regulating reserves and averaged **\$36.25/MWh**, **\$16.05/MWh** and **\$16.47/MWh** for active **regulating**, **spinning** and **supplemental** reserves respectively.

Weekly average activation prices for stand-by reserves ranged from **\$43.56/MWh** for **off-peak spinning** reserves to **\$140.30/MWh** for **on-peak supplemental** reserves.

Weekly average premium prices ranged from **\$3.75/MWh** for **off-peak supplemental** reserves up to **\$4.57/MWh** for **on-peak and off-peak regulating** reserves.

## AS Market Shares by Fuel Type

Last week **hydro** units had the largest market share in the **active regulating** reserve market with **58.9%**. In the **active spinning** reserve market, **gas-cogen** units had the leading market share with **39.7%** while in the **active supplemental** reserve market, **hydro** units dominated with a **54.7%** market share.

**Coal** units dominated the **standby regulating** reserve market with a **86.9%** market share. Leading market share in the **standby spinning** market was held by **coal** units with a **60.9%** market share. In the **standby supplemental** reserve market, **gas** units had the leading market share with **45.8%**.

# RRO Procurement

# Glossary

- On-Peak Hours**  
In Alberta: HE08 through HE23, Monday through Saturday (prevailing Mountain time)  
In Mid-C: HE07 through HE22, Monday through Saturday (prevailing Pacific time)  
In Minn Hub: HE08 through HE23, Monday through Sunday (prevailing Central time)
- Off-Peak Hours**  
In Alberta: HE01 through HE07 + HE24 (of the same day), Monday through Saturday + HE01 through HE24 Sundays + holidays (prevailing Mountain time)  
In Mid-C: HE24 (of the previous day) through HE07 (of the day in question), Monday through Saturday + HE01 through HE24 Sundays + holidays (prevailing Pacific time)  
In Minn Hub: HE24 (of the previous day) through HE07 (of the day in question), Monday through Sunday (prevailing Central time)
- ATC**  
A measure of the maximum energy flow possible in one direction across an intertie.
- Market Heat Rate**  
The prevailing Pool price divided by the prevailing gas price.
- Sparks spread**  
Sparks spreads give an indication of the revenue available to cover costs after fuel costs have been paid. A positive spread indicates it is more economical to buy gas and generate electricity while a negative spread indicates it is more economical to buy electricity from the grid.
